Indianapolis, Indiana 46204

Dear Beth McCord,

**Reference: Henry Street Bridge Project – Greenlawn Cemetery Investigation (DHPA #28221)**

Stantec has completed investigation of the western end of the project area by removing burials located between the river's edge and approximately 60 feet (18.3 meters) east (see attached map – area noted in green). Following removal and excavation of graves in this area, additional mechanical stripping was completed by the Stantec team to ensure complete investigation. Upon completion of the archaeological investigation, Stantec collaborated with the contractor to monitor and complete excavation needed for bridge construction on the riverbank. The completion of the investigation in the area described and planned construction in this area comply with the project work plan approved by your office on September 18, 2024.

Respectfully,

**Stantec Consulting Services Inc.**
